

Trimark Capabilities: 508-A Panel Shop Services

Panel Shop, Custom Solutions, Design Services

Trimark's U.L. 508-A listed facilities, located in El Dorado Hills, CA and Norfolk, VA, procure, manufacture, and assemble custom hardware solutions that support utility-scale power systems. Trimark, an established company operating for over 19 years, manufactures, assembles, and bench tests industrial control panels, hardened data loggers, and complete SCADA systems.

- Complete utility-scale SCADA systems, indoor and outdoor
- Solar-charged and hardwired battery backup solutions
- Utility meter enclosures
- Wireless communications enclosures and entire systems
- Trimark data gateway panels
- Meteorological stations
- Solar-based power systems
- Network interface enclosures for wireless and hardwired networks

Trimark also provides custom hardware solutions, including branding. Our in-house design services offer a wealth of experience in power and network engineering, designing both complex and simple solutions.

Inventory Capabilities

Trimark's production facilities maintain one million in inventory monthly with an average of 650,000 in monthly inventory activity through procurement, assembly, and deployment of hardware solutions. Trimark tracks materials from POP through delivery to sites.

Warranty Support

Trimark utilizes barcode technology and asset management software to track high-value items through the assembly process and after delivery. A unique barcode is attached to all assets and assemblies to maintain serial numbers and original purchase information. This helps highlight key points, such as manufacturers' warranty details, installation location, custom configuration information, device maintenance information, historical handling details, and more.

Online Ordering

Trimark's purchasing department is open 12 hours a day, operating in both Eastern and Pacific time zones. Trimark utilizes a web-based ordering system for customers. This enables customers to place product orders, upload designs, and receive automatic order status updates.

Experience

For over ten years, Trimark's U.L. 508-A production services have supported the utility-scale power industry, providing tens of thousands of industrial enclosures while adhering to strict guidelines. Trimark has also provided thousands of preconfigured hardware enclosures to support wireless radio networks feeding back to central DAS systems, wired networks, meter enclosures, and meteorological systems for the U.S. Navy and Coast Guard.
